

Report on travel grant no. 3883 from the Max Buchner Research Foundation

„MOF-Polymer Nanoparticles - Synthesized via Nitroxide-Mediated Polymerization - for Improved Drug Delivery into Cancer Cells“

*5th European Conference on Metal Organic Frameworks and Porous Polymers (EuroMOF2023)
(24-27 September 2023)*

Ilona Wagner, KIT, Institut of Functional Interfaces

From 24 to 27 September 2023, I had the opportunity to attend the "5th European Conference on Metal-Organic Frameworks and Porous Polymer" in Granada, Spain.

I was able to present my research on *"MOF polymer nanoparticles - synthesis by nitroxide-mediated polymerization - for enhanced drug delivery to cancer cells"*. During the conference, I had the chance to attend Omar Yaghi's plenary session where he talked about new directions in MOF research and how we can use ChatGPT in our daily research work.

I was also able to listen to talks by Patricia Horcajada and Dana D. Medina, who are doing research in a field related to mine. Their talks gave me new perspectives and thoughts for my work, and I was able to learn a lot from them.

Meeting scientists from other universities and reuniting with past conference attendees was possible during the conference dinner. The conversations were fantastic, and I learned about some fresh viewpoints, research project ideas, and cooperative opportunities. My experience at the conference was really positive, and I want to express my gratitude to the Max Buchner Research Foundation for providing the funding that made it possible for me to attend.
